

# Cell Power® SuperHite® 0-10-19

Phosphites are a very unique molecule and strong ability to move throughout the vascular system of plants and move any other nutrients with it right along to sink tissues. **OMEX®** has developed this very unique phosphite which contains some orthophosphate. Regular phosphites are not plant available and cannot sustain or provide required phosphates by crops. The conversion of the phosphite molecule into orthophosphate within plant tissues is extremely slow. **SuperHite® 0-10-19** contains 10% plant available phosphates and 8% phosphites. This is a unique combination derived from monopotassium phosphate, phosphorous acid, potassium hydroxide and the addition of copper, manganese and zinc EDTA. The use rates for this material are 2-8 pints/acre as a foliar or through your irrigation system (drip, micro, solid set, center pivot, etc.) Contact your regional **OMEX®** Territory Manager to discuss how you can incorporate **SuperHite® 0-10-19** into your crop nutrition program.

Analysis: 0-10-19 + 0.1%Cu + 0.1%Mn + 0.1%Zn  
Density: 10.97-11.1 lbs/gallon  
Packaging: Bulk or 265-gallon totes

**Quality & Crop Safety is our #1 Goal**
