

CELL POWER® K25

Tech Sheet

What is K25 ?

Cell Power® K25 is a cutting-edge potassium fertilizer designed to significantly enhance crop quality and yield. Composed of highly soluble potassium carbonate, urea and kelp extract, this innovative product boosts sugar content, improves color development, and supports cell division in harvestable portions. By optimizing nutrient uptake and regulating vital plant processes, Cell Power® K25 ensures robust plant health and higher yields.

KEY BENEFITS:

- **Increases Brix Levels:** Enhances sugar content in fruits and vegetables.
- **Improves Color Development:** Promotes better color in fruiting crops.
- **Supports Cell Division:** Contains kelp extract to aid cell division in harvestable portions.
- **Enhances Nutrient Uptake:** Optimizes the movement of water, nutrients, and carbohydrates within plant tissues.
- **Regulates Plant Processes:** Critical for cell water content, integrity, and transpiration rates.

Rates and Timings:

Application Rate:

- Apply at a rate of 32-64 ounces per acre as a foliar spray

Timing:

- Frequency: Apply every two weeks as needed, especially during high potassium demand periods like late bloom and early fruit set

This product is essential for improving the quality and yield of crops by enhancing sugar production, color development, and overall plant health.

Please read and follow the specific application and usage guidelines on the label for best results.
