

# WINE GRAPES & POTASSIUM

KEEP YOUR VINES  
THRIVING WITH QUALITY  
NUTRITION FROM

**CELL POWER®  
K25 2-0-25**

Optimizing potassium in wine grape production can be challenging with variables such as rootstock, variety and yield influencing crop need. Potassium is in highest demand as berries are developing. Soluble potassium can also play a role in efficient water use, which is particularly important if soils become dry during fruit development. Prior to harvest soluble potassium is important to help transport sugar into the fruit and reach optimal brix. Growers across the country depend on Cell Power® K25 to provide quality soluble potassium ready to meet the demands of your quality crop.
