

Cell Power®

Calcium Platinum 10%

OMEX® has developed this unique Calcium, all in one foliar fertilizer blend to help with all your calcium needs. This material is powered by the EBA™ technology present in the Calcium Plus 8%. eba Technology works by stimulating absorption of Calcium into tissues which conventional fertilizer cannot penetrate. Calcium Platinum 10% contains eba Technology which supports the plants natural processes to enable Calcium absorption where a plants natural system is inefficient in allowing for calcium absorption. eba Technology allows Calcium Platinum 10% to work at very low rates, and to be effective on all fruiting crops even in growing conditions or timings where conventional products are ineffective.

In addition, this blend contains a wide range of secondary nutrients and micro-nutrients, which will aid with overall plant health and yield. The use rates of this are low at 1-4 quarts/acre as foliar. This material can be applied to a wide range of crops, including permanent crops, as well as field and vegetable crops.
