

Cell Power® N-Ergy™

12-0-5 Urea/Potassium Nitrate

This is a proprietary blend of Urea and potassium nitrate which helps the plant take up Urea forms of nitrogen and promote more size development and flowering in all crops this is applied to.

This blend is a 12-0-5 and weighs about 9.65 lbs/gallon. The field rate of this material would be ½ gallon/acre every two weeks during the fruit set and sizing period of the crop. This may be blended with a wide range of other liquid and dry fertilizer products during this time frame. Nonetheless, a jar test is always recommended to ensure compatibility of the blend.

This form of nitrogen is stabilized to prevent the breakdown of Urea into nitrate, which then promotes more vegetative growth at the expense of reproductive growth. Urea taken up as such promotes more flowering and increases the size and number of the harvestable portions of most of your fruiting-type crops.

Analysis: 12-0-5

Density: 9.65 lbs/gallon

Packaging sizes available: 2.5 gallon and 265 gallon totes

Quality & Crop Safety is our #1 Goal
