

Cell Power® N-Ergy For Rice

Cell Power® N-Ergy is an innovative new product that supplies Nitrogen in a form known as Amine. This Amine Nitrogen form promotes reproductive growth rather than vegetative growth. If applied at the 3-6 leaf stage Cell Power® N-Ergy yields more tillers per plant, thus the possibility of more grain heads per plant.

Cell Power® N-Ergy also contains our 20 Amino Acid package and our Proprietary plant extract package. If applied between green ring to mid-boot stage, this innovative technology will reduce stress and yield a plant that is more productive at photosynthesis with improved grain fill.

Applications Rates & Timing: 2 Applications preferred

1st Application: 16 ounces/acre at 3 to 6 leaf stage to improve tillering. May be applied with herbicides.

2nd Application: 16 ounces/acre at early to late boot stage to improve photosynthesis efficiency and grain fill. May be applied with fungicides.

Quality & Crop Safety is our #1 Goal
