

Cell Power® Protein Plus™ Manganese 6%

Manganese is a critical element with several key functions in plants. Manganese is important for the synthesis of chlorophyll, as well as nitrate assimilation. This element is also responsible for the synthesis of fatty acids, as well as carotenoid pigments, essential during the maturing stage of most crops.

Cell Power® Protein Plus™ Manganese 6% contains protein hydrolysates which aid in the formation of proteins within the crop tissue. Foliar nutrition in the form of protein hydrolysates, provide ready-made building blocks for protein synthesis. In addition, the protein hydrolysates help move the manganese to the target tissue when applied foliar or through drip irrigation.

Cell Power® Protein Plus™ Manganese 6% is a convenient liquid formulation that is easy to handle and tank mix without the worry of clogging spray nozzles or emitters. Use 1-4 quarts per acre, starting early in the season and during the growing season as tissue and soil sample results dictate. If you intend on blending this material with other liquid or dry fertilizers, a jar test is recommended to ensure compatibility.

Analysis: 6% Mn

Density: 10 lbs/gallon

Packaging: 2.5-gal, 275-mini-bulk containers

Quality & Crop Safety is our #1 Goal
