

Cell Power[®]

TruBoost 5-0-0

TruBoost 5-0-0 with magnesium, boron, molybdenum and an extract of proprietary seaweeds is a well-established nutrient blend for optimizing plant health, particularly during the bloom and fruit set stages of development.

Magnesium plays several critical roles: including the transfer of phosphorus during key enzymatic reactions, such as in meristematic cells of growing points in plants, protein synthesis and carbohydrate partitioning.

Boron is a key constituent in maintaining cell wall integrity and elasticity during cell division and differentiation as well as cell membrane integrity and functioning. Boron has also been associated with pollen production and viability and critical in pollen tube elongation, subsequently leading to successful pollination.

Molybdenum is needed in minute quantities in plants, however it functions critically in nitrogen metabolism and fertilization, where molybdenum has been shown as a limiting factor in pollen size and viability.

The seaweed extract contains compounds recognized to mitigate plant stress and aid in the development of flowers, fruiting structures, and overall plant development.

Analysis: 5-0-0 + 2.5% Mg + 2% B + 0.02% Mo

Density: 10.5 lbs/gallon

Packaging: 2.5-gal, 265-mini-bulk containers

Quality & Crop Safety is our #1 Goal
