

Cell Power[®]

SizeN[®] Berries

Cell Power[®] SizeN[®] for berries is a smart fertilizer which focuses the plant's energy towards reproductive growth (i.e. production of flowers and fruit), rather than vegetative growth. Cell Power[®] SizeN[®] uses unique chemistry to hold the nitrogen in the amine form. Applied in low rates during the growing season, Cell Power[®] SizeN[®] will increase the overall number and size of fruit in all berry crops.

Cell Power[®] SizeN[®] acts on three levels: it moves more N into the crop, generates growth in the harvestable portion of the crop and is much more energy efficient than nitrate. This is especially important during times when the crop can be under any kind of environmental stress.

Also with just 2 quarts per acre per application, a little N goes a long way. Cell Power[®] SizeN[®] supplies plants with nitrogen in a form that will not leach past the root zone, and plants require less energy to process amine-N, which is particularly important during periods of stress.

Cell Power[®] SizeN[®] also supplies potassium, necessary for starch synthesis as well as the transport of sugars, water and nutrients which, in combination with the improved growth habit of the amine technology, increases the quality of berries.

Add Cell Power[®] SizeN[®] to a good nitrogen fertility program to improve size and uniformity in your berries.

Application rate: Apply through irrigation system at 1 quart/acre at transplanting, 2 qts/acre at 14-day interval through the growing season.

Analysis: 15-0-7
15% Nitrogen (N) 13.7% Urea, 1.3% Nitrate 7%
Potassium (K₂O)

Quality & Crop Safety is our #1 Goal
