

SulfOMEX®

SulfOMEX® is a convenient foliar-applied liquid suspension containing 31% sulfur with the addition of potassium and phosphorus. Our unique suspension technology allows for a nutritionally dense product containing 2 lb P₂O₅, 1.3 lb K₂O and nearly 4 lb elemental sulfur per gallon that is well-dispersed in the spray mix providing excellent coverage of leaves and fruit.

The benefits of sulfur are well documented, particularly with reduction in sulfur-based pesticides, industrial emissions of sulfur and the growing nutritional demands of higher-yielding crops. Sulfur has many plant health functions, among which are the formation of chlorophyll, proteins, oils and antioxidants. Foliar applications of sulfur can be beneficial when there is an immediate crop demand, in cold or saturated soils or when sulfur is out-competed by high levels of soil nitrates. In addition, since sulfur is relatively immobile in the plant, foliar applications may better meet crop demands for this nutrient. Crops with a high sulfur requirement include alfalfa, Cruciferous vegetables, onions and garlic, celery, corn, sugar beets and watermelon.

Packaging: 2.5-gallon containers

Quality & Crop Safety is our #1 Goal
