

CELL POWER® SuperpHite®

Tech Sheet

What is SuperpHite®?

CELL POWER® SuperpHite® is a unique liquid fertilizer that combines orthophosphate and phosphite. This blend provides both immediate and sustained phosphorus availability, enhancing root growth and overall plant health. It also includes potassium, zinc, and manganese, which are essential for photosynthesis, water regulation, and enzyme activation.

KEY BENEFITS:

- **Dual Phosphorus Sources:** Provides immediate and sustained phosphorus availability
- **Enhanced Root Growth:** Encourages robust root development
- **Improved Plant Health:** Boosts overall plant vigor and establishment
- **Increased Crop Quality:** Results in firmer, larger fruit with higher Brix levels
- **Versatile Application:** Suitable for foliar spray or irrigation systems

Rates and Timings:

Application Rate: Typically, 2-8 pints per acre

Timings:

- **Early and Throughout the Growing Season:** Apply early in the growing season and continue as needed to address phosphorus and potassium deficiencies
- **Foliar or Irrigation:** Can be applied as a foliar spray or through irrigation systems (drip, micro, solid set, center pivot, etc.)

These guidelines designed to provide immediate and sustained phosphorus availability, enhancing root growth and overall plant health, while correcting nutrient deficiencies to improve crop quality and yield.

Please read and follow the specific application and usage guidelines on the label for best results.
